

Millennium Neurofeedback – Neurofeedback Psychologist

We are looking for someone with a Masters degree or higher in Psychology! {Or a registered clinical counsellor!}

You must be licensed within the province of British Columbia or be willing to do so if you are required to move to British Columbia for the position. We are willing to help you relocate to the Vancouver, British Columbia area if you are moving for this position from out of province/state. U.S. candidates can apply!

Millennium Neurofeedback is a new wellness centre in North Vancouver, B.C. We use the BrainMaster and Thought Technology Neurofeedback systems for qEEGs and training.

Does the brain fascinate you?

Does watching someone recover get you excited?

Do you love to serve others?

Are you comfortable/savvy with technology?

Are you a good encourager?

Are you a good listener?

What does a Neurofeedback Psychologist/RCC do?

- Administers Neurofeedback brain training and qEEGs to adults and children.
- Assumes responsibility for the execution of the Neurofeedback Training Plan.
- Coordinates scheduling of appointments and keeps track of sessions delivered to plan.
- Selects and adjusts neurofeedback protocols to maximize effectiveness of training.
- Tracks, charts and monitors patient's training sessions and symptomatic progress.
- Reviews patient progress and training effectiveness with the patient's caregiver or patient.
- Keeps the treatment room clean, stocked and prepared for each patient session.
- Ideally is capable of performing psychological assessments or other mental health assessments, such as for autism to bring more value to the clients.

Who can apply:

- MA/MS in psychology, social work, counseling, marriage family therapy, rehabilitation counseling, chiropractic, recreational therapy, exercise physiology
- Previous experience in with biofeedback and/or neurofeedback is required for this position. BCIA - Certified is a huge plus!
- Must be comfortable/savvy with technology
- Experience working with children
- Excellent listening skills
- Strong organizational and planning skills
- Feels comfortable with hands-on therapy

What is Neurofeedback?

Neurofeedback (NFB), also called neurobiofeedback, is a type of biofeedback that uses real-time displays of brain activity, most commonly electroencephalography (EEG), to teach self-regulation of brain function. Sensors are placed on the scalp by using a cap to measure electrical activity, with feedback presented using video displays or sound. There is significant evidence and research supporting neurotherapy for generalized treatment of multiple conditions, including anxiety, depression, ADD/ADHD, autism, memory, cognitive functioning, and even sports enhancement. It has been used for over four decades. NFB is relatively non-invasive and is administered as a long-term treatment option, typically taking a month to complete.
